Genes encoding tRNAs are predicted by tRNAscan-SE (Sean Eddy, Washington University School of Medicine, St. Louis, http://genome.wustl.edu/eddy/tRNAscan-SE/). This sequence may not be the entire insert of this clone. It may be shorter because we remove overlaps between-neighboring submissions. The 5' clone is MCB22 and the 3' clone is MHP21.

Genes with similarity to proteins in the databases are described

as 'putentive'. 'like' or 'similar to'. Genes that have EST

similarity but no significant protein similarity are described as

'unknown proteins'. Genes that are annotated based only on gene

prediction software are described as 'hypothetical proteins'.

The software programs used to predict genes include: Grail

(Informatics Group, Oak Ridge National Laboratory,

http://compbio.ornl.gov/section/index.html), GENSCAN (Chris Burge,

http://gromic.stanford.edu.chris/GENSCANW html), Fexa (V.Solovyev

& A.Salamov, Sanger Centre, http://genomic.sanger.ac.uk/),

NetPlantGene (S. M. Hebsgaard, et al., CBS, Technical University of

Denmark, http://www.cbs.dtu.dk/NetPlantGene.html) and

eWotif(Nevill-Manning, C.G. Wu, T.D. & Brutlag, D.L.,

http://motif.stanford.edu/projects.html);

It currently consists of 17 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Novel VRN1 polynucleotide sequence encoding a polypeptide which alters vernalization response of plant in which VRN1 nucleic acid is expressed. useful for influencing and assessing vernalization phenotype of plants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention provides the protein and coding sequences of Arabidopsis thaliana VRNI. This protein is capable of altering the vernalisation responses of a plant. Also provided are a number of PCR primers used to isolate the sequences. The sequences are useful in the
                                                                                                                                                                                                                                       ALIGNMENTS

This invention relates to a novel method for altering one or more plant characteristics. Specifically, it refers to identifying genes that are up or down-regulated in transgenic plants overexpressing the heterodimeric or down-regulated in transgenic plants overexpressing the heterodimeric cor down factoristics accordingly. The present invention describes alter plant characteristics accordingly. The present invention describes corpy, therepouts and animal feed products, where generating transgenic plants for the production of growth regulators. CC charymes, therapeutics, pharmaceuticals and animal feed products, where the altered plant characteristics are selected from increased yield or biomass, enhanced survival capacity, stress tolerance, plant architecture or physiology, altered endoreduplication, biochemistry, signal or physiology, altered endoreduplication, biochemistry, signal or passive to the corresponding wild type plants. Accordingly, these cach relative to the corresponding wild type plants. Accordingly, these contrains also be useful as positive or negative selectable markers during transformation of cells or tissues. The identified genes play a cole in a variety of biological processes such as DNA replication, cell cole in a variety of biological processes such as DNA replication, cell cole in a variety of biological processes such as DNA replication, cell colescentification as transcription factors. This polymucleotide sequence is thate cress cDNA repressed 1.3 fold or more in plants overexpressing the EZFA/DPa

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention provides the protein and coding sequences of Arabidopsis thaliana VRN1. This protein is capable of altering the vernalisation responses of a plant. Also provided are a number of PCR primers used to isolate the sequences. The sequences are useful in the production of crop plants, where they are able to control the timing of Ilowering, the duration of vernalisation required, the optimum temperature, or even eliminate the need for vernalisation completely. The present sequence is the VRN1 gene

The invention relates to identifying a stress condition to which a plant cell has been exposed, comprising: (a) contacting nucleic acid representative of expressed polynuclectides in the plant cell with an array or probes representative of the plant cell genome; and (b) detecting a profile of expressed polynuclectides in the plant cell characteristic of a stress response. The method is useful in the production of transgenic plants, cells and seeds and in producing plants with increased tolerance to abiotic stress. The present sequence is that of an Arabidopsis thaliana stress regulated gene (ABZ12196-ABZ17574) used in methods of the invention. Note: The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied to Derwent by the European Patent Office
                                                                                                 Identifying a stress condition to which a plant cell has been exposed and producing plants with increased tolerance to these abiotic stresses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                TCAAAGTTCTACGAGAGTGCTTCTGCGAGAAAGAGAACCGTGACTGCAGAAGAAAAAGAGAG 684

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention describes an Arabidopsis thaliana nucleic acid (I). The polypeptide (II) encoded by (I), transgenic plant (III) or genetically modified cell (IV) are useful for screening a candidate agent for its biological effect, by combining the acadidate agent with (II), (III) or (IV), and determining the effect of the candidate agent on (II), (III) or (IV). (I) is useful for identifying homologous or related genes, for producing compositions that modulate the expression or function of its encoded protein, for mapping functional regions of the protein, in diagnosis, for studying associated physiological pathways, for genetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel Arabidopsis thaliana nucleic acid useful for identifying homologous or related genes, and to create genetically modified and transgenic organisms, such as plant cells and plants.

manipulation of cells, preferably plant cells, in screening assays of various plant strains to determine the strains that are capable of withstanding a particular disease or environmental stress, for enhancing or inhibiting production of biosynthetic product in a plant, for producing polypeptides, as probes for the detection of mRNA in biological samples, to generate ribozymes or oligonuclectides, and to create genetically modified and forming oligonuclectides, and to create genetically modified and cransgenic organisms, such as plant cells and plants. (II) or (III) is transgenic organisms, such as plant cells and plants. (II) or (III) is cusful for introducing or improving disease resistance and stress tolerance in plants, screening biological active agents, e.g., fungicides, insecticides, etc., and for elucidating biochemical pathways. (III) is useful as crops for their enhanced diseased resistance, enhanced traits of interest, for screening programs, as crops which exhibit captance represents a nucleic acid that may correspond to naturally sequence represents a nucleic acid that may correspond to naturally cocurring Arabidopsis thaliana expressed sequences. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the US patent office at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      367
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              848
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              307
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             908
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     968
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     187
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      788

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            29-JUN-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         30-JUN-1999
 The invention relates to identifying a stress condition to which a plant cell has been exposed, comprising: (a) contacting nucleic acid arepresentative of expressed polynucleotides in the plant cell with an array or probes representative of the plant cell genome; and (b) detecting a profile of expressed polynucleotides in the plant cell characteristic of a stress response. The method is useful in the production of transgenic plants, cells and seeds and in producing plants with increased tolerance to ablotic stress. The present sequence is that of an Arabidopsis thaliana stress regulated gene (ABZ12196-ABZ17574) used in methods of the invention. Note: The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied to Derwent by the European Patent Office

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention describes an Arabidopsis thaliana nucleic acid (I). The polypeptide (II) encoded by (I), transgenic plant (III) or genetically modified cell (IV) are useful for screening a candidate agent for its biological effect, by combining the candidate agent with (II), (III) or (IV), and determining the effect of the candidate agent on (II), (III) or producing compositions that modulate the expression or function of its encoded protein, for mapping functional regions of the protein, in diagnosis, for studying associated physiological pathways, for genetic manipulation of cells, preferably plant cells, in screening assays of warious plant strains to determine the strains that are capable of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel Arabidopsis thaliana nucleic acid useful for identifying homologous or related genes, and to create genetically modified and transgenic organisms, such as plant cells and plants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             withstanding a particular disease or environmental stress, for enhancing or inhibiting production of biosynthetic product in a plant, for producing polypeptides, as probes for the detection of mRNA in biological samples, to generate additional copies of (I), to generate ribozymes or oligonucleotides, as single stranded DNA probes or as triple-strand transgenic originals, such as plant cells and plants. (II) is useful for introducing or improving disease resistance and stress
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    tolerance in plants, screening biological active agents, e.g., fungicides, insecticides, etc., and for elucidating biochemical pathways. (III) is useful as crops for their enhanced diseased resistance, enhanced
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           traits of interest, for screening programs, as crops which exhibit enhanced tolerance to environmental stress, or to produce a factor. This sequence represents a nucleic acid that may correspond to naturally occurring Arabidopsis thaliana expressed sequences. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the US patent office at sequence.uspto.gov/sequence.html?DocID=999909770423
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Price JL, Raines TM, Yu Y;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

i Sequence 1, Application US/09692570

i Sequence 1, Application US/09692570

i Patent No. 679466

i GENERAL INFORMATION:

i APPLICANT: Bult et al.

i TITLE OF INVENTION: Complete Genome Sequence of the Methanogenic Archaeon, Methanococ Patent No. 6797466

i TITLE OF INVENTION: jannaschii

i TITLE OF INVENTION: jannaschii

i FILE REFERENCE: PB275C1

CURRENT APPLICATION NUMBER: US/09/692,570

CURRENT PILING DATE: 1996-08-22

i PRIOR PILING DATE: 1996-08-22

i PRIOR PILING DATE: 1997-08-22

i NUMBER OF SEQ ID NOS: 20

i SOFTWARE: Patentin version 3.1

i ENGTH: 1664976
